

Essentials

• {number}: Transform created R functions into Web APIs

- Web API
 - URL interface that abstracts away underlying data computation
 - A client sends a request, a server sends a response

- Decorator

- A function that enhances another function.

Attached in the lines above the original function.

Essentials

- `{plumber}`: Transforms **decorated** R functions into **Web APIs**
- Web API
 - URL interface that abstracts away underlying data computation
 - A client sends a request, a server sends a response
- Decorator
 - A function that enhances another function.
